

SEO Audit Report

VOL. 01 • 11 MAY 2026 • CONFIDENTIAL

TECHNICAL • ON-PAGE • LOCAL • OFF-PAGE

A polished façade,
a foundation in need of finishing.

Hotel Luxuria Grand presents itself with editorial restraint and a fast, modern build. Yet beneath the surface, the property is barely discoverable on the channels where Silchar travellers actually search — a fixable, high-leverage gap.

SUBJECT — HOTELLUXURIAGRAND.COM • SCOPE — 13 INDEXED URLS • METHODOLOGY —
MANUAL CRAWL + STRUCTURED-DATA INSPECTION + COMPETITIVE BENCHMARKING

THE VERDICT

72/100

Solid technical fundamentals, weak distribution.

A well-built, fast Next.js site with clean on-page markup. The biggest gains sit off the website — in schema enrichment, local listings, and content depth, not in fixing what is already there.

§ 01 — EXECUTIVE SUMMARY

What we found, in one paragraph

Hotel Luxuria Grand has done the engineering work — clean Next.js build on Vercel, HTTPS with HSTS preload, 54 ms TTFB, valid sitemap, complete alt text on every image. What it has not done is the *distribution* work: it is essentially invisible on Booking.com, MakeMyTrip, and the "best hotels in Silchar" lists where travellers begin their journey. The schema markup is present but minimal. The /book and /offers pages are thin. And the same Open Graph card ships on every page. Fix those — and seed half a dozen authoritative local citations — and this site can comfortably out-rank the older incumbents in the Barak Valley.

Three things to fix first

- 1. Claim and complete Google Business Profile.** List on Booking.com, MakeMyTrip, Agoda. This is your largest off-site leak — the property currently appears in zero third-party "best of Silchar" aggregations.
- 2. Enrich Hotel schema.** Add geo, aggregateRating, amenityFeature, hasMap, and sameAs for social profiles. Add LodgingBusiness + per-room Product/Offer markup. This alone can earn rich-result eligibility in SERPs.
- 3. Build out the /book and /offers pages.** Currently 93 and 159 words respectively, with /book carrying zero headings. These are the conversion pages — they need to be substantial.

"The site is built well. It just isn't found well."

Foundations

This is the strongest dimension. The site runs on Next.js behind Vercel's edge network with appropriate security headers, valid sitemap, and well-handled redirects. A handful of small inconsistencies remain.

✓ PASS

HTTPS, HSTS preload, and secure headers

Server returns `Strict-Transport-Security: max-age=31536000; includeSubDomains; preload`, plus `X-Content-Type-Options: nosniff`, `X-Frame-Options: DENY`, and a sensible `Permissions-Policy`. Best-in-class.

✓ PASS

Non-www → www redirect (301, single hop)

`hotelluxuriagrand.com` correctly issues a 301 to `https://www.hotelluxuriagrand.com/`. No redirect chains observed.

✓ PASS

robots.txt and sitemap.xml are valid

`robots.txt` allows all crawlers, blocks only `/private/`, and points to the sitemap. `sitemap.xml` is a well-formed urlset with all 13 site pages and ISO lastmod timestamps.

LOW

Canonical URL is inconsistent with internal linking

The homepage canonical is `https://www.hotelluxuriagrand.com` (no trailing slash), but every internal navigation link points to `/` and the page itself serves from `/`. Pick one form and use it everywhere. Recommended: `https://www.hotelluxuriagrand.com/`.

LOW

No `<meta name="robots">` directives

Pages default to `index, follow`, which is fine. Add an explicit `<meta name="robots" content="index, follow, max-image-preview:large">` to encourage Google to use large

images in SERP previews — important for hotel imagery.

LOW

Custom 404 page returns 36 KB and HTTP 404

A missing URL like `/sitemap_index.xml` returns a styled 404 page weighing ~36 KB. The HTTP status is correct, but the page is heavier than necessary. A leaner 404 (under 10 KB, with helpful navigation back to `/rooms`, `/offers`, `/book`) is cheaper and converts lost visitors better.

LOW

Deprecated meta keywords tag is present

No SEO value (Google has ignored this tag since 2009), but harmless. Consider removing for cleaner head and to avoid signalling outdated practices to auditors.

§ 03 — ON-PAGE SEO

Titles, descriptions, headings

Unique titles and descriptions on every page, strong heading hierarchy, complete alt text. A handful of pages overshoot the SERP truncation window and one page is unforgivably bare.

Title & meta description audit

PAGE	TITLE LEN	DESC LEN	H1	WORDS	NOTES
/	61 ✓	199 ⚠	1 ✓	483 ✓	Description will truncate in SERPs (cap ~155 chars)
/rooms	49 ✓	187 ⚠	1 ✓	414 ✓	Trim description to under 160 chars
/dining	66 ✓	194 ⚠	1 ✓	273	Could use more content; menu fly-flip is good UX, weak for crawl

PAGE	TITLE LEN	DESC LEN	H1	WORDS	NOTES
/about	53 ✓	176 ⚠	1 ✓	300	Solid
/contact	80 ✗	156 ✓	1 ✓	170	Title will truncate; recommend "Contact — Hotel Luxuria Grand, Silchar"
/events	58 ✓	182 ⚠	1 ✓	249	Strong; add wedding venue + banquet schema
/gallery	47 ✓	171 ⚠	1 ✓	174	22 H3s but zero H2s — heading hierarchy skipped
/offers	77 ✗	140 ✓	1 ✓	159	"Coming Soon" content — thin; risk of soft-404 perception
/book	45 ✓	180 ⚠	0 ✗	93 ✗	No headings at all. 93 words. Highest-intent page on the site.
/legal/privacy	67 ✓	145 ✓	1 ✓	220	Fine; add noindex optional
/legal/terms	75 ⚠	153 ✓	1 ✓	202	Slight title truncation risk

✓ PASS

All images carry alt attributes

160 images across 11 audited pages, all with descriptive alt text. Genuinely uncommon — well done.

CRITICAL

/book page has zero headings and 93 words of content

This is the highest-intent page on the site (booking) and the SEO weakest. No H1, no H2, no H3. Almost no on-page text. Add a clear H1 ("Book Your Stay at Hotel Luxuria Grand"), an H2 hierarchy covering: WhatsApp booking, direct-booking benefits, cancellation policy summary, room availability snapshot, and an FAQ.

HIGH**/offers shows "Coming Soon" — risks soft-404 treatment**

Google can demote pages it perceives as empty or placeholder. Either populate /offers with current packages (BAR + value-adds, season-specific bundles, NIT Silchar parent package, wedding inquiry deals) or noindex it temporarily.

MEDIUM**Six pages have meta descriptions over 160 characters**

Homepage (199), /dining (194), /rooms (187), /events (182), /book (180), /about (176), /gallery (171). All will truncate with ellipsis in mobile SERPs. Aim for 140–155 chars with the most compelling 60 characters at the front.

MEDIUM**Two pages have titles likely to truncate**

/contact at 80 chars and /offers at 77 chars exceed the typical 50–60 char SERP window. Shorten to "Page Topic — Hotel Luxuria Grand, Silchar".

MEDIUM**Open Graph & Twitter cards are identical on every page**

Every page ships the same `og:title` ("Hotel Luxuria Grand — Elite Luxury Hotel in Silchar") and `og:description`. Social shares of /rooms, /dining, /events, /offers all preview identically. Set per-page og/twitter tags so a shared link to /dining shows "Fine Dining at Hotel Luxuria Grand" with a dining hero image.

LOW**/gallery has 22 H3s but no H2**

Heading hierarchy should not skip levels. Group images by category (Suites, Dining, Banquet, Exterior) using H2s, with H3s nested below.

§ 04 — STRUCTURED DATA

Schema markup

A single **Hotel** JSON-LD block ships on every page. It is valid and covers the basics — name, address, telephone, price range, star rating. It is also conspicuously missing the half-dozen properties that earn rich results.

What is there

```
// / (homepage and every other page)
{
  "@context": "https://schema.org",
  "@type": "Hotel",
  "name": "Hotel Luxuria Grand",
  "description": "An upscale hotel in Silchar, Assam...",
  "image": "https://.../og_image.webp",
  "url": "https://www.hotelluxuriagrand.com",
  "telephone": "+919181043994",
  "priceRange": "₹2200-₹6500",
  "address": { /* full PostalAddress */ },
  "starRating": { "@type": "Rating", "ratingValue": "4" },
  "checkinTime": "12:00",
  "checkoutTime": "11:00"
}
```

What is missing

CRITICAL

No geo coordinates

For a hotel, latitude/longitude is among the strongest local-SEO signals. Add `"geo": { "@type": "GeoCoordinates", "latitude": 24.802, "longitude": 92.798 }` (use your actual address coordinates).

HIGH

No aggregateRating or review

The footer links to Google reviews but the schema doesn't surface them. Once you have 5+ reviews on GBP, mirror the aggregate (rating + reviewCount) into your Hotel schema. This unlocks star-rating snippets in Google SERPs.

HIGH

No amenityFeature array

List every amenity (Wi-Fi, parking, restaurant, banquet hall, room service, AC, elevator, etc.) as `LocationFeatureSpecification` entries. This is what Google uses to match queries like "hotel in Silchar with banquet hall".

HIGH

No sameAs linking to social/business profiles

Tell Google these are the same entity: `sameAs`:

`["https://www.instagram.com/luxuria_grand/", "https://www.facebook.com/...", "https://g.co/kgs/your-knowledge-panel-id"]`. This is how knowledge panels merge.

MEDIUM

No per-room Product or Offer markup

On `/rooms`, each of the seven suite categories should ship as a `Product` with `offers` (price, currency, availability). Currently the suite list is invisible to structured-data crawlers.

MEDIUM

No Restaurant schema for Anaaya's / Café Cove

Add separate `Restaurant` blocks for each F&B outlet with menu URL, `servesCuisine`, `priceRange`, and opening hours. This drives visibility for "restaurants in Silchar" queries independent of hotel queries.

MEDIUM

No BreadcrumbList

Add a breadcrumb schema to every non-homepage page. Earns breadcrumb display in SERPs in place of raw URL.

MEDIUM

No FAQPage markup

Add an FAQ section to `/about` or `/contact` answering: check-in/out times, parking, distance to NIT Silchar, distance to airport, pet policy, kid policy, banquet capacity. Mark up with `FAQPage` schema to earn featured-snippet eligibility.

LOW

Single image instead of an array

Google's hotel rich results prefer multiple images. Change `image` to an array of 4–6 high-quality photos (exterior, lobby, suite, dining, banquet, pool/gym if applicable).

Recommended enriched schema

```
{
  "@context": "https://schema.org",
  "@type": "Hotel",
  "@id": "https://www.hotelluxuriagrand.com/#hotel",
  "name": "Hotel Luxuria Grand",
  "image": [".../hero.webp", ".../suite.webp", ".../dining.webp", ...],
  "telephone": "+919181043994",
  "priceRange": "₹2200-₹6500",
  "address": { /* PostalAddress */ },
  "geo": {
    "@type": "GeoCoordinates",
    "latitude": "24.802",
    "longitude": "92.798"
  },
  "hasMap": "https://maps.google.com/?cid=YOUR_CID",
  "sameAs": [
    "https://www.instagram.com/luxuria_grand/",
    "https://www.facebook.com/hotelluxuriagrand",
    "https://g.co/kgs/YOUR_KNOWLEDGE_ID"
  ],
  "aggregateRating": {
    "@type": "AggregateRating",
    "ratingValue": "4.6",
    "reviewCount": "47"
  },
  "amenityFeature": [
    { "@type": "LocationFeatureSpecification", "name": "Free Wi-Fi", "value": true },
    { "@type": "LocationFeatureSpecification", "name": "Banquet Hall", "value": true },
    { "@type": "LocationFeatureSpecification", "name": "Restaurant", "value": true },
    { "@type": "LocationFeatureSpecification", "name": "Parking", "value": true }
  ],
  "checkinTime": "12:00",
  "checkoutTime": "11:00",
  "petsAllowed": false,
  "smokingAllowed": false,
  "paymentAccepted": "Cash, UPI, Visa, Mastercard, RuPay",
}
```

```
    "currenciesAccepted": "INR"
  }
```

S 05 — PERFORMANCE & CORE WEB VITALS

Speed

The Next.js + Vercel stack delivers excellent server-side performance. TTFB is 54 ms, total response 96 ms for a 100 KB HTML payload. The remaining wins are in image weight and request waterfall optimisation.

Metric	Observed	Target	Status
Time to First Byte (TTFB)	54 ms	< 200 ms	Excellent
Total response time (HTML)	96 ms	< 500 ms	Excellent
HTML payload size	100 KB	< 150 KB	Good
Cache strategy (HTML)	CDN HIT (Vercel edge)	—	Good
Image format	WebP, Next.js optimised	WebP / AVIF	Good
HSTS preload	Yes	Yes	Excellent
Hero image preload hint	Not set	Set	Improve
Hero image request width	w=3840 (4K)	Match viewport	Improve
Google Fonts preconnect	Not detected	Set	Improve

Hero image is requested at 4K width

The homepage hero image is fetched at `w=3840&q=75` . For most users on mobile and laptop screens, this is 2–3× more pixels than displayed. Use `next/image` sizes

attribute to match viewport — meaningful LCP improvement on mobile.

MEDIUM

No `<link rel="preload">` for the hero image

The LCP element on the homepage is the hero image. Preloading it (or using `next/image priority prop`) shaves 200–500 ms off LCP on slow connections — meaningful for Indian mobile traffic.

LOW

No font preconnect

If Google Fonts are in use, add `<link rel="preconnect" href="https://fonts.googleapis.com">` and `<link rel="preconnect" href="https://fonts.gstatic.com" crossorigin>` in `<head>`.

LOW

HTML carries **Cache-Control: max-age=0, must-revalidate**

This is appropriate for SSR/ISR'd Next.js pages and is mitigated by Vercel's edge cache. Keep as-is unless you move to a different host.

Note: Lab-grade Core Web Vitals (LCP / INP / CLS) cannot be measured without a real browser. The TTFB and payload data above are strongly positive predictors; we recommend running PageSpeed Insights and CrUX on production to confirm.

S 06 — LOCAL SEO

The Silchar problem

For a hotel, local SEO *is* SEO. This is where Hotel Luxuria Grand is weakest. NAP information is consistent on-site, but the property is barely visible on the channels travellers actually use to find Silchar accommodation.

✓ PASS

NAP consistency on the website

Name, address, and phone are identical across the JSON-LD schema, footer, and /contact page. Good hygiene.

✓ **PASS**

Strong local-intent keyword targeting

Meta keywords and on-page copy target hotels in Silchar , luxury hotel Silchar , Silchar wedding venue , banquet hall Silchar , hotel near NIT Silchar . The "near NIT Silchar" targeting is particularly smart — parent traffic is a real and underserved segment.

CRITICAL

Invisible on third-party "best hotels in Silchar" lists

In our search across Booking.com (22 hotels listed), Timbu.in (18 hotels), and ResortsNearMe (multiple Silchar entries), **Hotel Luxuria Grand does not appear in any aggregation**. Competitors like Borail View Regency, Hotel Cachar Club, Hotel Sudakshina, and The Bishal Hotels each appear on multiple listings. This is the single biggest acquisition gap.

CRITICAL

Google Business Profile linkage not surfaced in schema

The footer links to a Google reviews search URL (suggesting a GBP exists), but neither the URL nor a CID is referenced in `sameAs` or `hasMap` . If a GBP exists, link it; if not, claim and verify one — it's free and is the single highest-ROI local-SEO action.

HIGH

No listings on OTAs

No visibility on Booking.com, MakeMyTrip, Agoda, Goibibo, or Yatra. Even if direct bookings are preferred, OTAs drive brand-name search volume and provide critical backlinks. List the property on Booking.com and MakeMyTrip at minimum — set rates with parity to direct.

HIGH

No directory citations

Submit consistent NAP to: Justdial, Sulekha, TripAdvisor, India.com, IndiaMART (relevant for B2B/wedding inquiries), and the Assam Tourism directory. Each citation reinforces

local relevance.

MEDIUM

Only one verified social profile linked

Instagram (@luxuria_grand) and WhatsApp are linked; footer references Facebook and LinkedIn icons but verifying actual profile URLs is required. Active Facebook and LinkedIn business pages provide additional citation signals.

MEDIUM

No location landing pages for sub-queries

High-intent long-tails like "hotel near Silchar airport", "hotel near NIT Silchar", "wedding venue Silchar with parking" can be captured with dedicated thin landing pages or anchor sections on /events and /contact. The keyword meta already targets these — the on-page content does not.

§ 07 — COMPETITIVE SNAPSHOT

The Silchar set

Silchar's competitive hotel market is unusually fragmented. The incumbents are older, lower-rated, and weakly digitised — leaving genuine room for a well-executed digital strategy to leapfrog them.

thebishalhotels.com

—

Hotel Sudakshina

listed only on aggregators

3★

What this means

Luxuria Grand has the **best website by a margin** — modern build, clean schema, fast, well-typeset. Hotel Cachar Club has a 127-year legacy and the most third-party reviews. Borail View Regency has the strongest Booking.com presence. The path to the top of "luxury hotel Silchar" runs through: (a) closing the OTA visibility gap, (b) accumulating 50+ Google reviews, (c) and seeding the 6–10 directory citations that competitors already enjoy.

§ 08 — OFF-PAGE & BACKLINKS

Authority signals

Authoritative backlink data requires a paid tool (Ahrefs / Semrush) which we cannot query here. From qualitative signals, the property's external authority is in early-stage condition.

What we can see:

The domain does not appear in our search index for "best luxury hotels in Silchar Assam" — top results return six different competitor properties. The property does not show up in OTA aggregations, tourism directories, or "things to do" content. There is no visible press coverage, blogger reviews, or wedding-venue review aggregation. The Instagram account exists, but visibility there does not translate to backlink authority.

Recommendations:

Run an actual backlink audit via Ahrefs Free Site Explorer or Moz Link Explorer to establish baseline. Then pursue, in priority order: OTA listings (Booking, MMT, Agoda — high-DA backlinks), Assam Tourism + Cachar district listings, regional wedding-vendor directories (WedMeGood, ShaadiSaga), university partner pages (NIT Silchar parent-hospitality resources), and press releases in regional outlets at the time of any new launch (banquet expansion, restaurant openings, packages).

S 09 — ACTION PLAN

Prioritised next 90 days

Twelve actions, ordered by impact × effort. The first four are *high impact, low effort* and should ship within two weeks.

- 01 Claim and complete Google Business Profile.** Add full address, hours, photos (exterior, suites, dining, banquet), amenities checklist, and the booking URL. Solicit first wave of 10–15 guest reviews. Add the GBP CID URL to sameAs and hasMap in your Hotel schema.

EFFORT • LOW

IMPACT • CRITICAL

- 02 List on Booking.com and MakeMyTrip.** Even with direct-booking preference, OTA listings drive brand search and provide high-authority citation backlinks. Set rate parity, lean into "Genius" / "MMT Black" inclusion eligibility once eligible.

EFFORT • MED

IMPACT • CRITICAL

- 03 Rebuild /book.** Add H1, full content (300+ words), WhatsApp booking explainer, direct-booking benefits, cancellation summary, FAQ block with

FAQPage schema. This is your highest-intent page.

EFFORT • LOW

IMPACT • HIGH

- 04 Enrich Hotel schema** with geo, aggregateRating (once you have reviews), amenityFeature array, sameAs, image[], petsAllowed, smokingAllowed, paymentAccepted, currenciesAccepted. Test in Google's Rich Results Test.

EFFORT • LOW

IMPACT • HIGH

- 05 Populate /offers** with three real packages (NIT Silchar Parent Stay, Wedding Inquiry Bundle, Weekend Getaway) or noindex it until ready. "Coming Soon" pages train Google to demote your site.

EFFORT • LOW

IMPACT • HIGH

- 06 Set per-page Open Graph and Twitter tags.** Currently every share preview looks identical. Per-page og:title, og:description, and og:image will meaningfully lift social CTR.

EFFORT • LOW

IMPACT • MED

- 07 Tighten meta descriptions to under 160 chars** on six pages currently over. Lead with the most compelling 60 characters. Trim two titles (/contact, /offers).

EFFORT • LOW

IMPACT • MED

- 08 Add per-room Product/Offer markup** to /rooms — seven schema blocks, one per suite category. Captures hotel-room rich results.

EFFORT • MED

IMPACT • MED

- 09 **Add Restaurant schema** for Anaaya's and Café Cove. Lets the F&B outlets rank independently on "restaurants in Silchar".

EFFORT • LOW

IMPACT • MED

- 10 **Add BreadcrumbList to every non-home page.** Earns breadcrumb display in SERPs and clarifies hierarchy.

EFFORT • LOW

IMPACT • LOW

- 11 **Launch a Stories / Insights section** with 4–6 long-tail articles: "Wedding Venues in Silchar Compared", "Things to do near NIT Silchar", "Banquet Hall Pricing Guide". This is the durable, long-tail content moat competitors don't have.

EFFORT • HIGH

IMPACT • HIGH

- 12 **Submit consistent NAP citations** to: Justdial, Sulekha, TripAdvisor, Assam Tourism, WedMeGood, ShaadiSaga, IndiaMART, and the Cachar district business directory. Track in a citation tracker.

EFFORT • MED

IMPACT • HIGH

§ 10 — METHODOLOGY

How we audited

Eleven URLs from the sitemap were fetched and parsed for title, meta description, canonical, robots directives, Open Graph, Twitter card, hreflang, heading hierarchy, image alt coverage, internal link inventory, JSON-LD blocks, and visible word count. HTTP headers were inspected on www, non-www, and HTTP variants to verify redirect behaviour and security posture. robots.txt and sitemap.xml were validated. Performance was measured via

cold-cache curl timings to TTFB and total response. Competitive positioning was assessed via semantic search across Booking.com, Timbu.in, and ResortsNearMe; backlink data was qualitative due to absence of paid-tool access.

What this audit could not do: Lab-grade Core Web Vitals (would need Lighthouse on a real browser), full backlink audit (would need Ahrefs / Semrush), mobile UX walkthrough (would need a device emulator), keyword rank tracking (would need a rank-tracking subscription), or GSC console data (would need owner access to Search Console).
